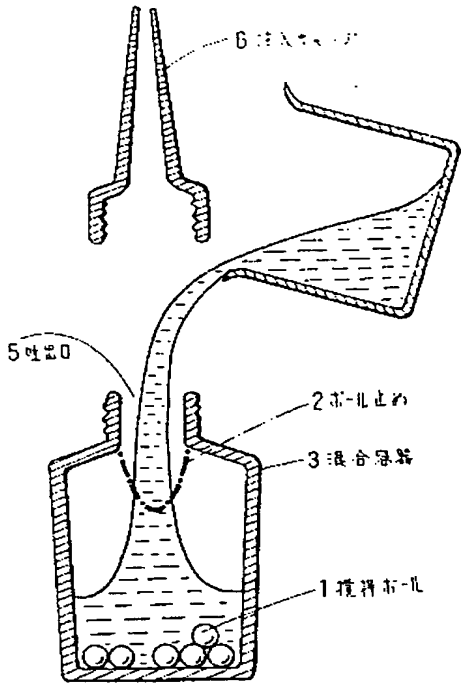
TITLE : METHOD FOR AGITATING, MIXING AND INJECTING HIGH-VISCOSITY LIQUID



ABSTRACT : PURPOSE: To mix a plurality of liquids contg. high-viscosity components easily and homogeneously even in the place such as a high location or underground difficult-to obtain mechanical motive power by using agitation balls and a ball stopper.

CONSTITUTION: Proper numbers of agitation balls 1 and liquid are introduced into a mixing vessel 3, agitated and mixed after capping it. The sufficiently agitated and mixed liquid is directly injected into an injection place via a ball stopper 2 or via a freshly fitted injection cap 6 through the discharge port 5 of the decapped mixing vessel 3. By such a way, it is agitated and mixed easily and quickly without using mechanical motive power. Therefore this method is effective in the place such as the outdoors, a high location, underground and the seabed wherein mechanical motive power is not used.
